Revenue Distribution By Period

Revenue Degrow By ~0.50%

Active Users Distribution By Period

Active Users Degrow By ~8.27%

ARPU Distribution By Period

ARPU Grew BY ~8.46 %

Revenue remained largely stable after the 5G launch, declining marginally by 0.5%, indicating that the initiative did not materially improve top-line performance.

Active users declined by 8.28%, indicating customer attrition.

ARPU increased by 8.48%, suggesting growth was driven by premium plan adoption rather than customer acquisition.

Although ARPU improved following the 5G launch, the decline in active users offset these gains, resulting in flat revenue performance. This suggests that the 5G strategy improved monetization but failed to drive customer growth.

Atliqo 5G Launch Impact Analysis – Growth Drivers

Lucknow, Gurgaon, Patna, Raipur, Jaipur, Bangalore and Pune collectively contributed over 7.96% of total revenue growth, indicating that growth was concentrated in a few major markets.

Premium 5G plans contributed the majority of incremental revenue, supporting the monetization-led growth hypothesis observed in the executive overview. Plans contributing to 100 % probably bought after 5G launch and plans contributing 0% means they are discontinued after 5G launch.

Several cities fell into the Monetization Driven category, suggesting that revenue gains were achieved despite customer attrition. This highlights the need for stronger retention strategies.

Atliqo 5G Launch Impact Analysis – Key Findings & Recommendations

[Home Page](#)[Executive
Overview](#)[Growth
Drivers](#)[Risk &
Opportunit
ies](#)[Deep Dive
Analysis](#)[Key
Findin...](#)

Key Findings

- Revenue remained flat (-0.5%) after 5G launch.
- Active users declined by 8.3%, indicating customer attrition.
- ARPU increased by 8.5%, suggesting monetization from premium plans.
- Growth was concentrated in Lucknow, Gurgaon, and Patna.
- Several cities exhibited monetization-led growth but worsening churn.

Recommendations

- Strengthen retention programs in high-revenue cities with increasing churn.
- Expand premium plans similar to p11–p13.
- Investigate acquisition strategies in declining markets.
- Monitor competitor gains in key cities.
